Suite powered by SAP HANA

Faster Upgrade Time to SAP® ERP powered by SAP HANA® with SAP Solution Manager

PALRAM, a global leader in manufacturing extruded thermoplastic sheets, deployed SAP Solution Manager to upgrade to SAP ERP powered by SAP HANA. This significantly reduced the project time and got the new application up and running with minimal downtime in less than three months.

Before: Challenges and Opportunities

- Upgrade from the SAP ERP application to SAP ERP powered by SAP HANA with minimal freeze and downtime
- Minimize testing effort
- Safeguard and optimize the use of SAP Business Suite powered by SAP HANA
- Deploy SAP Solution Manager for ongoing operations.

Why SAP

- Intuitive documentation of all process steps with process management in SAP Solution Manager
- Recording of 700 technical bills of materials and use of a business process change analyzer, which helped reduce testing to 200 essential cases
- Test suite, which can accelerate extensive testing in three cycles
- Custom development management cockpit and code inspector, which can be utilized to proactively fix code before testing

After: Value-Driven Results

- Improved testing through ongoing use of the business process change analyzer and technical bills of materials
- Created central process documentation as a single source of truth
- Improved business continuity through the launch of operations, job, system, and interface monitoring

“We were able to minimize the risk while completing the upgrade project in record time with the help of SAP Solution Manager.”

Avishai Zamir, CIO, PALRAM Industries Ltd.
